

THE BENEFITS OF VIDEOMANAGER 10'S NEW FEATURES

ESTATE REPORTS

Estate Reports can be created in VideoManager 10, which provide users with a comprehensive summary of every device, DockController, and EdgeController within their estate - this includes sites connected to a central VideoManager.

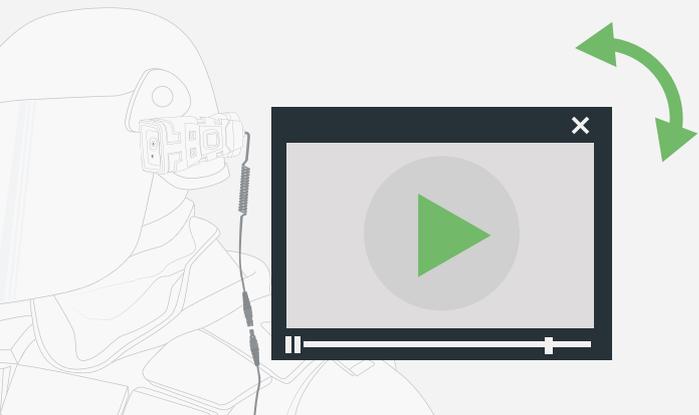

SUPPORTS THE NEW VT-100

The VT-100 is Edesix's newest addition to the lightweight and discrete VideoTag series, designed to be used by retail staff and other workers in public-facing roles. It is fully compatible with VideoManager 10, and can be configured via QR code.

INCLUDE REMOTE DEVICES IN FILTERED SEARCH

If VideoManager 10 is enabled as a site centre, users can choose whether to locate remote devices using the *Search* function. This will find all devices within sites connected to the central VideoManager.

X-STREAM ROTATION

An X-Series camera will automatically sample its orientation when recording and streaming begins, and will keep this orientation throughout the livestream.

LICENCES

In VideoManager 10, all of a user's purchased licences are now available to view under one pane in the *Admin* tab for ease of access. VideoManager also alerts users one week before their licence is due to expire.

VIDEOMANAGER 10 SPECIFICATIONS

Edesix provides you with VideoManager, the most advanced web-based software tool for managing video footage, system users, and your suite of Body Worn Cameras.

Extend your video management to every corner of your organisation, throughout the world.

FEATURE	DESCRIPTION / SPECIFICATION
ONStream	This licensed feature adds ONVIF-compatible streaming gateway capability to VideoManager. ONStream enables users to integrate their mobile workforce video streams into a VMS with unlimited channels.
ONVIF G	ONVIF G enables users to retrieve historic recorded footage from VideoManager into their VMS of choice for viewing and presentation. The original footage can remain on VideoManager, or be deleted as required by policy. This powerful tool allows the reuse of an existing VMS-based evidential preparation workflow to body-worn cameras, as well as static IP cameras.
Genetec and Milestone Support	VideoManager can be integrated with a Genetec or Milestone fixed camera infrastructure. VideoManager is compatible with several other VMSs. Please contact Edesix for further information.
Full Web Administration	VideoManager is a fully web-based application, which can be used on a tablet, computer or mobile phone. All aspects of administration, from device configuration to video redaction, can be performed from this interface.
Data Retention Controls	Automatic configurable footage management policies protect a user's evidential footage, but destroy aged non-evidential footage without user intervention.
Comprehensive Audit Trail	VideoManager keeps a comprehensive audit trail of every action performed on the system. This trail can be filtered by a number of criteria, including device, event type, and video URN.
Granular Security Access	VideoManager offers granular access to its UI - this means that users can only access the parts of the interface which are relevant to them.
Advanced Redaction Features	One-click redaction now features the ability to enhance background or foreground items identified in footage. Users can also insert text overlay within their incident videos. Redaction effects will not change the original footage.
Integral Remote-Site Access	With VideoManager 10, users can access the configuration and playback functions of any remote site directly from within the central VideoManager user interface.

ED-002-033-04

FEATURE	DESCRIPTION / SPECIFICATION
Two-factor Authentication	VideoManager 10 supports two factor authentication. This means that the system will prompt users for a code upon login, which will be provided by a phone app. Two-factor authentication can be enabled on a user-by-user basis, for entire roles, or VideoManager as a whole.
VT-50 and VT-100 QR Code Configuration	VideoManager 10 includes QR code configuration for the VideoTag VT-50 and VT-100, allowing a device to gain WiFi access for easy configuration within VideoManager. This feature is especially useful for people deploying VideoTags to places where they have no computer infrastructure (e.g. home workers).
User-specific WiFi networks	Users can create user-specific WiFi profiles, which only appear on their account. This allows users to configure a phone hotspot for use with a streaming VideoBadge without affecting other users on the system.
Specialised Reports	VideoManager gives a user the ability to download reports in the form of a spreadsheet, which provide information about certain aspects of the interface. As well as basic reports about devices, incidents, and videos, there are also more specific, detailed reports which users can perform.
Audio Recording and Configuration	A device can be configured so that when recording is started, audio is not initially recorded. The operator starts audio recording with a button click once consent has been verbally received from the subject being recorded. Alternatively, audio recording can be completely disabled.
Live Statistics	Users can view real-time statistics including information about the footage write rate, the total number of videos in the system, and the number of queued downloads.
Bulk Actions	Users can complete bulk actions on devices and DockControllers. These actions include upgrading, factory resetting, and forgetting.
Cloud Data Migration	Consolidate or move footage files using the "Evacuate Filespace" feature.
DockController DC-200 Support	DockController DC-200 adds a cost-effective, network and power-port saving dock solution. Up to 84 VideoBadges can be connected via one network point to a local-, remote- or cloud-hosted VideoManager instance.
Export Profiles	VideoManager's Export Profiles feature gives users a greater degree of export customisation, including the configurable use of title pages, watermark logos and watermarked signatures.
Import Videos	This licensed feature allows users to import non-VideoBadge generated video files into VideoManager for redaction and editing.
Manually Controlled Pre-record	A VideoBadge can be configured so that pre-record is manually started and stopped with button presses, rather than automatically pre-recording continuously. This feature enables better battery life, and ensures the wearer is in control of all recording. When Pre-record is disabled, a VideoBadge will record within one second of pressing record, and will provide up to 24hr standby time.

ED-002-033-04

FEATURE	DESCRIPTION / SPECIFICATION
Multiple Viewpoint	With VideoManager 10, this licensed feature gives users the ability to compile multiple clips from the same point in time into a single video in an incident. This makes it possible to play the clips back simultaneously.
Compatible Platforms	<p>VideoManager is designed to be installed on these platforms:</p> <ul style="list-style-type: none"> • Windows Server 2016 R2 Essentials, Standard & Datacenter • Windows Server 2012 R2 Essentials, Standard & Datacenter • Windows Server 2012 Essentials, Standard & Datacenter • Windows Server 2008 R2 Standard, Enterprise & Datacenter • Windows 10 Pro & Enterprise • Windows 8.1 Pro & Enterprise • Windows 8 Pro & Enterprise • Windows 7 Professional, Enterprise & Ultimate <p>VideoManager cannot be installed on OS X / macOS, but is compatible with Chrome on OS X / macOS.</p> <p>Edesix also offer VideoManager as a hosted service; Contact Edesix for more information.</p>
